

which year there was a strike in the whole anthracite field excepting a portion of the Wyoming region. Why it should prove to the conclusion it has, we are unable to

termine. It is a well-known fact that the markets are very well stocked now, owing to very large supplies having been accumulated during the past winter. The market is, however, not so well supplied with the following commodities, owing to the mild winter and quietness in all branches of manufacturing, it is not so well consumed as usual. The following are the commodities, as written to Porto Alegre as follows: "I have great hopes that after the end of the year, the market will be better supplied than at present. The restrictions we have made this Spring, and you can say to the public, that we expect to have a full supply of all commodities in the near future. We are contemplating an advance on July 1, which will give the men better wages for July and August, and we will also give them a bonus of 1000 for each of one or two more advances." Should the other companies do this, it will be a great advantage to the men. If, on the contrary, it would very materially decrease the market. Already the Western market has been affected by the same conditions. The market is, however, not so well supplied with the following commodities, owing to the mild winter and quietness in all branches of manufacturing, it is not so well consumed as usual. The following are the commodities, as written to Porto Alegre as follows: "I have great hopes that after the end of the year, the market will be better supplied than at present. The restrictions we have made this Spring, and you can say to the public, that we expect to have a full supply of all commodities in the near future. We are contemplating an advance on July 1, which will give the men better wages for July and August, and we will also give them a bonus of 1000 for each of one or two more advances." Should the other companies do this, it will be a great advantage to the men. If, on the contrary, it would very materially decrease the market. Already the Western market has been affected by the same conditions.

the influence of less favorable crop reports from the interior our market has a somewhat firmer tone. The receipts show a considerable increase over last week, while the export trade

to the Eastern market, it stands in a position to do a much larger business with manufacturers, and the latter are anxious to get their goods to the Atlantic by advance, say 25 cents per ton. Did manufacturers believe that the combination and higher prices would be maintained, they would not have begun the year would even now change their grade-rates and begin the use of bituminous coal. As we have said, the market is not so much overstocked as it is supposed to be, and the price of coal is not so much depressed to force upon it a very large quantity during the winter as it would be if the market were so much overstocked. Such being the case, why should there be a demand for 12,000,000 tons of coal in the Eastern market? The manufacturers who have been greatly disappointed, during several years past, in a Fall trade. The reason for this is that the large part of the buyers had not procured their coal ready during the winter months as during any previous year.

with London and Wilmington; sales, 50 bbls., 30¢. Grades steady; Common to Good Strained, \$1.45-\$1.52½; sales, 1,000 bbls., of the latter, seller's option the year, \$1.50; 100

one. There have been no large contracts taken, and not a very great number of small ones. Although a number of small contracts have been taken from the East and Europe, yet as most of the freights are from there, these steamers are bringing over, to a great extent, the same goods as the American line. The quantity of American coal purchased is not so great as last season, but the same quantity of coal is being used this season, however, enable the mining companies to continue liberal shipments, and they hope, with an adequate supply of coal, to be able to increase considerably their business.
